EDUCATION

National University of Singapore Aug-2022 - Jun 2026

Bachelor of Computing (Computer Science), Honours (Distinction)

- GPA: 4.48/5 | Focus Area: Networking & Distributed Systems | Teaching Assistant, CS1010X Programming Methodology (Python)

WORK EXPERIENCE

Binance (Singapore), *Full-Stack Software Engineer (Remote)* Oct 2026 - Present

Full-Stack Software Engineer Intern (Remote) May 2026 - Oct 2026

- Engineered full-stack P2P merchant onboarding workflows across web (React, Vue), mobile (Swift, Kotlin) and Java backend services (Spring, MyBatis), implementing RBAC approval pipelines with audit logging to streamline operations verification
- Designed internal AI development tools incorporating team-wide code review standards to cut down manual review overhead

Alta Exchange (Singapore), *Full-Stack Software Engineer Intern* Jan 2026 - May 2026

- Executed a full-stack schema migration across 4 services via TypeORM migrations, updating NestJS APIs and frontend clients to maintain zero downtime
- Implemented a scheduled cron job using Google Cloud Scheduler and Terraform to automatically sync dealroom investment content to exchange trading assets across services
- Reduced duplicate frontend development across 2 services by building a reusable React bank-account onboarding flow and documenting shared components in Storybook

Ola Chat (Singapore), *Frontend Software Engineer Intern* Jul 2025 - Dec 2025

- Designed a modular CI/CD orchestration framework using GitHub Actions and Aliyun Flow, decoupling build and deployment pipelines across 3 environments, reducing infrastructure cost and staging server resource overhead by 8%
- Engineered 10+ React mini-games with WebView, ensuring UI consistency across devices through meticulous design reviews and UX through performance optimizations, including lazy loading and TanStack Query caching
- Deployed a centralized observability pipeline via Sentry, integrating session replay tracking and Core Web Vitals monitoring to automate error detection and ensure system reliability

Voltade (Singapore), *Full–Stack Software Engineer Intern* Jan 2025 - Jun 2025

- Diagnosed and patched a critical production issue by analyzing server logs to identify email prefetching conflict with Supabase and restore access for enterprise Outlook users
- Engineered a robust ETL pipeline using Graphile Worker job queue and PostgreSQL, automating the extraction and idempotent transformation of 20,000+ records to ensure data synchronization with external platforms
- Engineered CRM features integrating WhatsApp broadcasting with webhook metrics tracking and RAG-powered AI chatbots
- Developed a video-to-report system using React and FFmpeg uniform sampling, leveraging OpenAI tool calls for automated student identification, cutting report generation effort by 75%

Podsmart AI (United States), *Full–Stack Software Engineer Intern (Remote)* May 2024 - Aug 2024

- Built a server-side usage tracking system using FastAPI and Supabase that closed a billing loophole, preventing unauthorized free access to premium transcribed content and protecting subscription revenue
- Resolved a critical authorization issue by implementing role-based access control middleware using JWT
- Identified and resolved SQL bottleneck by adding a composite index, optimizing API performance and reducing load time by 60%

PROJECTS

TypeDash V2 (Repo) Jul 2025 - Present

- Engineered a concurrent multiplayer game server in Golang, implementing an event-driven game loop with fine-grained mutex locking across parallel WebSocket goroutines, benchmarked 99th-percentile latency under 2ms for 400+ concurrent users

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, SQL, Java, C

Technologies: React, TanStack Query, Tailwind CSS, WebSockets, Linux, Bash, Docker, GCP

Certifications: Anthropic Claude Certified Architect – Foundations
