WORK EXPERIENCE

Binance (Singapore), *Full-Stack Software Engineer (Remote)* Oct 2026 - Present
Full-Stack Software Engineer Intern (Remote) May 2026 - Oct 2026

- Engineered full-stack P2P merchant onboarding flows across 2 web projects (React), 2 mobile apps (Swift, Kotlin) and 4 Java backend services (Spring Boot, MyBatis) for users in over 100 countries
- Implemented RBAC approval pipelines (Vue) with audit logging to streamline operations for payment method verification in India
- Built internal LLM-powered code review skills encoding team-wide review standards, adopted by 9 engineers across 2 teams to reduce UI bugs caught in production per sprint

Alta Exchange (Singapore), *Full-Stack Software Engineer Intern* Jan 2026 - May 2026

- Executed a full-stack schema migration across 4 services via TypeORM migrations, updating NestJS APIs and frontend clients to maintain zero downtime
- Implemented a scheduled cron job using Google Cloud Scheduler and Terraform to automatically sync dealroom investment content to exchange trading assets across services
- Reduced duplicate frontend development across 2 services by building a reusable React bank-account onboarding flow and documenting shared components in Storybook

Ola Chat (Singapore), *Frontend Software Engineer Intern* Jul 2025 - Dec 2025

- Designed a modular CI/CD orchestration framework using GitHub Actions and Aliyun Flow, decoupling build and deployment pipelines across 3 environments, reducing infrastructure cost and staging server resource overhead by 8%
- Engineered 10+ React mini-games with WebView, ensuring UI consistency across devices and UX through performance optimizations, including lazy loading and TanStack Query caching
- Deployed a centralized observability pipeline via Sentry, integrating session replay tracking and Core Web Vitals monitoring to automate error detection and ensure system reliability

Voltade (Singapore), *Full–Stack Software Engineer Intern* Jan 2025 - Jun 2025

- Diagnosed and patched a critical production issue by analyzing server logs to identify email prefetching conflict with Supabase and restore access for enterprise Outlook users
- Built CRM features integrating WhatsApp broadcasting with webhook metrics tracking and RAG-powered AI chatbots
- Developed a video-to-report system using React and FFmpeg uniform sampling, leveraging OpenAI tool calls for automated student identification, cutting report generation effort by 75%

Podsmart AI (United States), *Full–Stack Software Engineer Intern (Remote)* May 2024 - Aug 2024

- Built a server-side usage tracking system using FastAPI and Supabase that closed a billing loophole, preventing unauthorized free access to premium transcribed content and protecting subscription revenue
- Resolved a critical authorization issue by implementing role-based access control middleware using JWT
- Identified and resolved SQL bottleneck by adding a composite index, optimizing API performance and reducing load time by 60%

EDUCATION

National University of Singapore Aug 2022 - Jun 2026
Bachelor of Computing (Computer Science), Honours (Distinction)

- GPA: 4.48/5 | Focus Area: Networking & Distributed Systems | Teaching Assistant, CS1010X Programming Methodology (Python)

PROJECTS

TypeDash V2 (Repo) Jul 2025 - Present

- Engineered a concurrent multiplayer game server in Golang, implementing an event-driven game loop with fine-grained mutex locking across parallel WebSocket goroutines, benchmarked 99th-percentile latency under 2ms for 400+ concurrent users

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, SQL, Java, C
Technologies: React, Vue, TanStack Query, Tailwind CSS, FastAPI, Spring Boot, NestJS, Linux, Bash, Docker, GCP, Terraform
Certifications: Anthropic Claude Certified Architect – Foundations
