EDUCATION

National University of Singapore

Jun 2026 (Expected)

Bachelor of Computing (Computer Science), Honours

- GPA: 4.47/5 | Focus Area: Networking & Distributed Systems | Teaching Assistant, CS1010X Programming Methodology (Python)

WORK EXPERIENCE

[Alta Exchange](#) (Singapore), Full-Stack Software Engineer Intern

Jan 2026 - May 2026

- Executed a full-stack schema migration across 4 services via TypeORM migrations, updating NestJS APIs and frontend clients to maintain zero downtime
- Implemented a scheduled cron job using Google Cloud Scheduler and Terraform to automatically sync dealroom investment content to exchange trading assets across services
- Reduced duplicate frontend development across 2 services by building a reusable React bank-account onboarding flow and documenting shared components in Storybook

[Ola Chat](#) (Singapore), Frontend Software Engineer Intern

Jul 2025 - Dec 2025

- Designed a modular CI/CD orchestration framework using GitHub Actions and Aliyun Flow, decoupling build and deployment pipelines across 3 environments, reducing infrastructure cost and staging server resource overhead by 8%
- Engineered 10+ React mini-games with WebView, ensuring UI consistency across devices through meticulous design reviews and UX through performance optimizations, including lazy loading and TanStack Query caching
- Refactored legacy URL routing across client, server, and database layers, standardizing URL structure and optimizing nginx configuration — cutting average request handling complexity across 5 services
- Deployed a centralized observability pipeline via Sentry, integrating session replay tracking and Core Web Vitals monitoring to automate error detection and ensure system reliability

[Voltade](#) (Singapore), Full-Stack Software Engineer Intern

Jan 2025 - Jun 2025

- Architected and delivered an end-to-end AI curriculum planner adopted across 28 preschool branches, iterating on features through weekly stakeholder reviews and live demos to align product with educator workflows
- Diagnosed and patched a critical Supabase authentication bug by analyzing server logs to identify email prefetching conflict and restore access for enterprise Outlook users
- Engineered a robust ETL pipeline using Graphile Worker job queue and PostgreSQL, automating the extraction and idempotent transformation of 20,000+ records to ensure data synchronization with external platforms
- Developed a video-to-report system using React and FFmpeg uniform sampling, leveraging OpenAI tool calls for automated student identification, cutting report generation effort by 75%

[Podsmart AI](#) (United States), Full-Stack Software Engineer Intern (Remote)

May 2024 - Aug 2024

- Built a server-side usage tracking system using FastAPI and Supabase that closed a billing loophole, preventing unauthorized free access to premium transcribed content and protecting subscription revenue
- Resolved a critical authorization issue by implementing role-based access control middleware using JWT
- Identified and resolved SQL bottleneck by adding a composite index, optimizing API performance and reducing load time by 60%

PROJECTS

[TypeDash V2 \(Repo\)](#)

Jul 2025 - Present

- A real-time type-racing game using React/TanStack and Golang/WebSocket, deployed using Docker Compose on OVH Cloud VPS
- Engineered a concurrent multiplayer game server in Go, implementing an event-driven game loop with fine-grained mutex locking across parallel WebSocket goroutines, benchmarked 99th-percentile latency under 2ms for 400+ concurrent users

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, SQL, Java, C

Technologies: React, TanStack Query, Tailwind CSS, FastAPI, Node.js, WebSockets, Linux, Bash, Docker, GCP, nginx
